email: joseph.reeves at oadigital.net

---

Joseph deals with the communication of digital data. This covers a deliberately wide range of subjects; network design and maintenance, IP telephony and multimedia applications to name but a few. Within OA Digital, Joseph develops novel methods of communicating digital data with remote parties; mobile GIS, on-site recording and rapid surveying methods are just some examples.

Joseph gained a Masters degree with Distinction in Archaeology from Cardiff University in 2006. His dissertation, following an undergraduate study the year before, focused upon the various methods of archaeological dissemination currently employed in southern Romania. This work demonstrated that multivocal accounts of the past are made possible by employing a range of media, digital and otherwise, to reach your intended audience. Joseph has undertaken other independent research projects covering a diverse range of subjects that include GIS interrogations of phenomenology and methods of dealing with the past within a Web 2.0 environment.

Advancing the position of portable recording devices within both archaeology and related disciplines, Joseph has recently contributed to a range of projects including [gvSIG](#) , [Openmoko](#) and [One Laptop Per Child](#)

. Joseph is also working with

[IOSA.it](#)

to develop and promote the

[TOPS](#)

application.

Joseph takes responsibility for the [hardware](#) developments and sales undertaken by OA Digital and continues to work closely with various partners to provide the most appropriate technologies to our clients.

Joseph is a firm believer in Open Source Software, Open Standards and Open Data. He works to promote Oxford Archaeology's [Open Archaeology](#) initiative and has contributed to a number of other projects.

Browse our [Research](#) section for some of his recent papers and presentations.
